

# Universal battery inverter

## Overview

---

What is a battery inverter?

A battery inverter, also known as a DC to AC inverter, converts the direct current (DC) stored in a battery into alternating current (AC), which is the type of current typically used in homes, businesses and industry. Battery inverters are therefore essential for making use of stored solar power.

What motor types does the Universal inverter support?

The Universal Inverter supports not only the standard motor types PMSM and IM, but also EESM. A guided workflow via the software as well as automatic test procedures guarantee easy setup of motor types and sensors. Previous configurations can be accessed from the e-motor library.

Should you buy a battery inverter?

At the same time, battery inverters can also realise the two-way flow of energy between the grid and the energy storage system, improving the flexibility and reliability of the whole system. When shopping for a battery inverter, Topbull inverters are certainly a brand worth considering.

Do battery inverters convert 12V DC to 230V AC?

Battery inverters, converting 12V DC to 230V AC, play an important role in the operation of a PV system: PV systems generate direct current (DC) which must be converted into alternating current (AC) for use in homes, businesses, industry, and for feeding into the utility grid. This is the job of PV inverters.
