

Ups battery cabinet alarm

Overview

How do I connect a ups to a building alarm?

Line-Up-and-Match Wiring. Route the battery detect interface wiring from the UPS battery detect (building alarm) interface terminals through the top inter-cabinet access pass-through (see Figure 15) of the UPS cabinet and IBC to the IBC battery interface terminal block TB3. See Figure 27 or Figure 28 for terminal locations.

How many 93pm battery cabinets can a UPS system use?

The UPS system has been evaluated for use with a maximum of four 93PM Battery Cabinets. Use of any other configuration may result in fire, death, and voiding of the warranty. Disconnect the charging source prior to connecting or disconnecting battery terminals. Determine if the battery is inadvertently grounded.

What is the difference between a ups and a battery cabinet?

The UPS is available in 50 or 60 Hz with various output power ratings while the battery cabinet is available with 16 battery modules. The table below depicts the system model numbers and the stored energy capacity of the system. The End of Discharge Voltage limit for each battery cabinet for all models is 400.8V DC. Table 3.

How many battery modules does a ups have?

The System is housed in a one or two free-standing cabinets with safety shields behind the door and front panels. The UPS is available in 50 or 60 Hz with various output power ratings while the battery cabinet is available with 16 battery modules. The table below depicts the system model numbers and the stored energy capacity of the system.
