

Vilnius Base Station Site Planning Announcement

Overview

Why did Zaha Hadid design Vilnius railway station?

Zaha Hadid Architects' design to renovate Vilnius Railway Station and surrounding areas also incorporates energy production technologies and depolluting strategies to improve air quality within its adjacent neighbourhoods.

What is a Naujininkai station terminal?

The concept presents a unique, recognizable, contextually appropriate design for the new station terminal that creates network of public spaces of the highest quality and establishes important connections between the Naujininkai, Naujamiestis and Senamiestis districts of the city.

What is the composition of the Naujininkai station's new bridge?

The composition of the station's new bridge gradually transforms along its length; from the pitched roof defined by the existing neoclassical station's triangular pediment into softer geometries and volumes that reduce in scale to land at Pelosos Street in the Naujininkai district.
