

# What is the current of solar panels now

## Overview

---

Which countries are getting more solar panels in 2024?

Germany and Brazil saw slight dips, while the rest of the world added 65 GW, a 22% rise over 2023. Africa's solar market is also stirring. The continent imported 60% more solar panels from China over the past year, though a lack of reliable installation data makes it a challenge to track the true pace of deployment.

How has solar energy changed over time?

Solar energy has seen a dramatic transformation over the past few decades, making it one of the most accessible and efficient sources of renewable energy. Advances in technology, government incentives, and increased demand have driven down the cost of solar panels and improved solar panel efficiency over time.

Was 2024 a good year for solar power?

The year 2024 was a true landmark year for solar power. Global solar installations reached nearly 600 GW – an impressive 33% increase over the previous year – setting yet another record. Solar accounted for 81% of all new renewable energy capacity added worldwide.

How many solar panels are installed in 2024?

In 2024, between 554 GWdc and 602 GWdc of PV were added globally, bringing cumulative installed capacity to 2.2 TWdc. China continued to dominate the global market, representing ~60% of 2024 installs, up 52% y/y.
