

What is the price of Athens inverter

Overview

How much does a solar inverter cost?

Because they depend on the grid, there's no backup power during outages. Off-grid inverters vary from \$2000 to \$6000+, depending on the capacity and features. This type of inverter is designed for standalone solar systems not connected to the grid, making it ideal for remote locations without grid access.

How much does a hybrid inverter cost?

The hybrid inverter's price ranges from \$2000 to \$5000+, depending on capacity and features. It combines on-grid (grid tie) and off-grid functionality, simultaneously managing solar power, grid electricity, and battery storage. It is suitable for systems that store energy for backup while remaining grid-connected.

How much does a microinverter cost?

Microinverters have the advantage of ensuring the maximum energy for systems with shading or mismatched panel orientations. However, microinverters might have higher upfront costs due to the need for multiple units. String inverters cost from \$1000 to \$2500 for residential systems and have capacities from 3 kW to 10 kW.

How much does a grid-tied inverter cost?

A grid-tied inverter for a residential system costs between \$1000 and \$3000. These inverters are designed for systems connected to the utility grid that do not require batteries. They work by synchronizing the solar power output with the grid, and the excess power can be sold. Because they depend on the grid, there's no backup power during outages.
