

What kind of generator is used in the construction site container

Overview

What types of generators are used at construction sites?

At construction sites, the most common type of generator used is a portable generator. As the name suggests, a portable generator can be moved to different areas of the job site to power different tools and equipment, as needed. A standby generator is another type used as an alternate source of power in case the primary source fails.

What type of generator do you need for a construction project?

Phase: Generators come in single and three-phase options. For a construction project, you'll likely need the latter version, as it will deliver a more stable and reliable power supply. A simple way to calculate the best job site generator size for you is to add up the wattages of all the equipment and tools that require electrical power.

Do you need a generator for a construction site?

Having a generator on a construction site is important for a variety of reasons, including serving as a power source for tools and heavy duty equipment, providing emergency backup power, and even improving productivity. It is necessary to choose the right generator for your construction site to fully take advantage of these benefits.

How do I choose a construction generator?

To choose a generator for a construction site, consider generators that provide enough power to run at 70% to 90% capacity. When sizing a construction generator, you'll need to consider various factors to ensure the right size for your needs.
