

# What outdoor power supplies are used in RVs

## Overview

---

Camping power stations can utilise either AC (alternating current) or DC (direct current) power, and understanding the difference between the two is important for campers seeking to power their equipment. What power system does my RV use?

The first thing we're going to do is sort out what's powered by each system. The 12-volt (otherwise known as DC) power system in your RV provides power for essential electrical components that don't use a lot of power. Everything in the DC electrical system is powered by the RV house batteries.

What power supplies do you need for camping?

When you go camping, you may want to have some reliable sources of electricity for your devices and appliances. Some examples of portable power supplies for camping are: Jackery Explorer 500: This popular and versatile portable power station has a capacity of 518 Wh, an output of 500 W (1000 W peak), and an input of 100 W.

Which portable power supply is best for camping?

The Yeti 3000X is a high-performing portable power supply that is meant for full-time, off-grid camping. It has the highest output wattage and charge capacity of any of the portable power stations on our list. That means it also has the largest dimensions and the heaviest weight.

Do RVs use AC or DC power?

Understanding RV electricity is crucial for every RV owner. Your RV's electrical system powers everything from lights and fans to the refrigerator and HVAC system. Unlike homes that use only AC power, RVs utilize both AC and DC components. AC power comes from shore power connections, while DC power is supplied by your RV's batteries.
