

Which inverter should I use for Kathmandu solar container communication station grid connection

Overview

What is a pvs800 central inverter?

ABB's PVS800 central inverters are the result of decades of industry experience and the use of proven frequency converter technology. As such the central inverters provide a highly efficient and cost-effective way to convert the direct current generated by solar modules into high-quality and CO₂-free alternating current.

How many inverters are used in the ABB inverter station?

Two ABB central inverters are used in the ABB inverter station. The inverters provide high efficiency conversion with low auxiliary power consumption. The inverter station is easy to connect to any MW station configuration to match specific country or project requirements.

Why should you choose ABB inverter station?

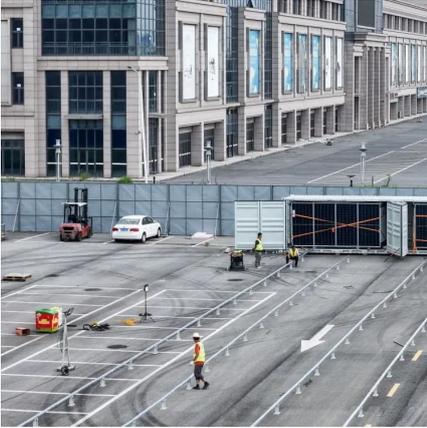

The inverters provide high efficiency conversion with low auxiliary power consumption. The inverter station is easy to connect to any MW station configuration to match specific country or project requirements. ABB can provide oil or dry type transformers to go with a wide selection of switchgear configurations.

How long does a pvs800 central inverter last?

The inverter station is designed for at least 25 years of operation. ABB's PVS800 central inverters are the result of decades of industry experience and the use of proven frequency converter technology.
