

Wholesale 37 5kva transformer in Argentina

Overview

What is a 37.5 kVA transformer made of?

Most single-phase 37.5 KVA transformers are made of solid resin mass, sealed in silica sand. This coverage is to enclose and protect the coil. The winding materials used in this transformer are copper with a 600V and 120/240V primary and secondary voltage, respectively.

What is a 37.5kva transformer?

The 37.5kva transformer usually has a single-phase unit with two voltages, a 240x480V primary and 120/240V secondary. It is robustly constructed using high-grade materials like budding and cold-rolled silicon steel laminations. This equipment is also powered with innovative technology to ensure it'll serve its purpose safely and efficiently.

What is a power transformer & autotransformer?

Transforming energy. Power transformers and autotransformers whether these work with off circuit or on load tap changer and with any of the cooling system alternatives known in the industry (ONAN, ONAF, OFAF, ODAF, among others), with expansion tank or with nitrogen chamber in its hermetic design.

What is a 3 phase transformer used for?

They are used in electrical distribution networks to step down three phase voltage in terms of consumption, both in metropolitan areas and in industries. These transformers are used for a medium voltage step down in the energy distribution network, usually from 33 kV to 13.2 kV.
