

# Wind power micro inverter

## Overview

---

What is a wind turbine inverter?

Wind inverters are units that work to convert the direct current power produced by the wind turbines into alternating current. This can be used to power systems in homes, businesses, and farmlands or exported to the electrical grid, making them one of the best renewable energy sources globally.

What is a grid-tied micro-inverter?

This study proposes a grid-tied micro-inverter combining the boost and flyback-based inverter topology and specially designed for the small WTG with permanent magnetic (PM) generator. The boost converter is used to step up the input voltage and track the maximum power point (MPP) of the WTG.

How MPPT inverter can be used for wind turbine & solar panel?

This inverters have several MPPT inputs could be used for wind turbine and solar panel. A battery bank can be connected on the inverter to store the energy produced by the energy source (wind and solar). The energy will be stored in the battery firstly, then power the load. Extra energy will be transmitted to the state grid.

Which wind turbine Inverter should I Choose?

The Uno in particular is a perfect product for those with smaller wind turbines or in systems that may require more than one wind inverter. Why Choose Our Wind Turbine Inverters?
