

Wind solar diesel and storage mobile power generation system

Overview

What is a solar-storage-diesel integrated system?

The basic configuration of the solar-storage-diesel integrated system includes a microgrid-integrated machine, distributed photovoltaic power generation components, and a microgrid management platform. The microgrid-integrated machine has a rated charge/discharge power of 30KW and 60KW, with a long-term overload capability of 110%.

What is a photovoltaic system?

This system includes solar, storage, and diesel power, with diesel generators as the main power source. Compared to TYPE A, the addition of an energy storage system allows for an increase in the capacity of the photovoltaic system.

What are the different types of energy storage systems?

Every MS is made up of distributed energy sources (such as PV, biomass, WT, and fuel cells), distributed energy storage units (such as BESU, supercapacitors, flywheels, and superconducting inductors), and a central control unit. Energy storage technologies are needed to use extra power or compensate for power shortages 10.

What is a diesel generator microgrid?

Since diesel generators need to run continuously and cannot operate at low power for long periods, and to ensure grid stability, this type of microgrid has a relatively low renewable energy penetration rate. This system includes solar, storage, and diesel power, with diesel generators as the main power source.
