

Yerevan BMS battery management control system enterprise

Overview

What is a battery management system & electrical battery disconnect unit?

The battery management system and electrical battery disconnect unit consist of several components designed to monitor, manage, control, and disconnect the battery cells of a battery-electric or plug-in hybrid vehicle. The battery management system includes a battery control unit and multiple cell supervision circuits.

What is a battery management system?

The battery management system includes a battery control unit and multiple cell supervision circuits. The electronic disconnect unit serves as an all-in-one solution that integrates a battery disconnect unit, a battery management system, and optionally the cell monitoring units. based on volume production possible due to global production network.

What is a distributed battery management system (BMS)?

Modern cars' lithium low-voltage auxiliary batteries, for instance, employ this architecture. Description: Each controller in a distributed battery management system (BMS) oversees a different portion of the battery pack. Advantages: Localized control, enhanced fault tolerance, and enhanced scalability.

What is a BMS used for?

A Battery Management System (BMS) is widely used in various applications such as electric vehicles (EVs), energy storage systems (ESS), uninterruptible power supplies (UPS), and industrial battery applications.
