

# **Zimbabwe solar power generation charges and discharges energy at night**

## Overview

---

How many solar power projects are there in Zimbabwe?

As of 31 July 2019, the Zimbabwe Energy Regulatory Authority (ZERA) had issued more than 77 power generation licences with 42 being solar power projects. A number of IPPs are already selling electricity to the Zimbabwe Electricity Transmission and Distribution Company (ZETDC) and feeding into the national grid.

Could solar power be cheaper in Zimbabwe?

Zimbabwe has enough solar power to support these. These solar systems could be made cheaper through the introduction of subsidies and tax incentives. Even better, the government could waive taxes on all certified systems coming into the country. And more needs to be done to publicise the use of gas in urban and rural households.

What is the potential of solar power in Zimbabwe?

Solar power has enormous potential both in small scale, such as water heating or in larger scale such as in solar power plants. Small scale power generators are used all over the country to ease the situation. Apart from the Kariba Dam power station, hydropower in Zimbabwe has still a lot of potential, especially along the Zambezi river.
